Reflection Paper: Building Your IT Career

1. What are the most important lessons you learned from the seminar?

The lesson I learned from the seminar is that building a successful career in IT requires continuous learning, adaptability, hard work, and dedicated practice. Because technology evolves rapidly, remaining relevant in the industry means continuously upgrading our skills and staying curious about modern innovations. Additionally, I learned that we should step out of our comfort zones and actively embrace new opportunities and technical challenges, as they serve as crucial stepping stones for personal and professional growth.

2. What new insights did you gain about cloud computing and its career opportunities in the IT industry?

I learned that Cloud Computing lets us store files, use programs, and open data over the internet instead of relying on local computers, which are called On-Premises systems. The seminar showed that the cloud makes it cheaper and easier to upgrade or add storage whenever needed. It also saves money on repairs and helps protect against Data Loss using Data Recovery. I also learned about the three main cloud types IaaS, PaaS, and SaaS which show how work is shared between a company and a cloud provider. Learning these ideas helped me see great career paths like Cloud Engineer, Cloud Administrator, and Cloud Solutions Architect

3. How can Microsoft certifications and credentials help you improve your skills and career opportunities as an IT professional?

Microsoft certifications can help me improve my knowledge and prove that I have learned specific IT skills. They can also make my resume stronger when applying for a job. Through these certifications, I can learn more about cloud computing, networking, and other Microsoft technologies. They can help me become more confident and prepared for future job opportunities.

4. What specific cloud computing or Microsoft technology skills would you like to learn or develop after attending the seminar?

After attending the seminar, I want to focus on learning Microsoft Azure, cloud management, and Cloud Data Security. Specifically, I want to learn how to set up cloud services using IaaS and PaaS while protecting sensitive data from security threats. To build these skills, I plan to follow online tutorials, complete practice labs, and use official Microsoft study guides.

5. How do you plan to apply the knowledge and insights you gained from the seminar in preparing for your future IT career?

I plan to apply what I learned by studying cloud systems and Microsoft technologies more deeply. I will practice my technical skills through hands-on activities, school projects, and online practice

courses. Along with technical knowledge, I will work on improving my problem-solving abilities and communication skills so I can be fully prepared for future job opportunities.

6. Based on the advice of our resource speaker, do you think it is advisable to apply directly to Microsoft after graduation? Why or why not? What preparations would you need to make to pursue this career opportunity?

Yes, I think it is advisable to apply directly to Microsoft after graduation because it is a good opportunity to start a career in IT and gain experience in a professional environment. However, I understand that getting hired may be challenging, so I need to prepare myself first. I should improve my technical skills, build projects, create a good resume, and earn relevant certifications. I also need to practice for job interviews and improve my communication skills. Even if I do not get accepted immediately, I will continue learning and gaining experience until I am ready for better opportunities.
