Reflection Paper: Building Your IT Career

1. What are the most important lessons you learned from the seminar?

The most important lesson I learned from the seminar is that building a career in IT requires continuous learning, practice, and hard work. Technology is always changing, so we need to improve our skills and learn new things. I also learned that we should not be afraid to try new opportunities and challenges because they can help us grow and become better IT professionals.

2. What new insights did you gain about cloud computing and its career opportunities in the IT industry?

I learned that cloud computing allows us to store files, use applications, and access data through the internet without relying only on our own computers. I also learned that cloud computing offers many career opportunities, such as cloud engineer, cloud administrator, and cloud solutions architect. This made me realize that learning about cloud technology can help me prepare for my future career in IT.

3. How can Microsoft certifications and credentials help you improve your skills and career opportunities as an IT professional?

Microsoft certifications can help me improve my knowledge and prove that I have learned specific IT skills. They can also make my resume stronger when applying for a job. Through these certifications, I can learn more about cloud computing, networking, and other Microsoft technologies. They can help me become more confident and prepared for future job opportunities.

4. What specific cloud computing or Microsoft technology skills would you like to learn or develop after attending the seminar?

After attending the seminar, I would like to learn more about Microsoft Azure, cloud computing, and cloud security. I also want to improve my skills in managing cloud services and protecting data from security threats. I plan to practice using these technologies and take online courses to gain more knowledge and experience.

5. How do you plan to apply the knowledge and insights you gained from the seminar in preparing for your future IT career?

I plan to apply what I learned by studying more about cloud computing and Microsoft technologies. I will practice my IT skills through school projects, online tutorials, and hands-on activities. I will also continue improving my problem-solving and communication skills. By doing these things, I can prepare myself for future job opportunities and become a better IT professional.

6. Based on the advice of our resource speaker, do you think it is advisable to apply directly to Microsoft after graduation? Why or why not? What preparations would you need to make to pursue this career opportunity?

Yes, I think it is advisable to apply directly to Microsoft after graduation because it is a good opportunity to start a career in IT and gain experience in a professional environment. However, I understand that getting hired may be challenging, so I need to prepare myself first. I should improve my technical skills, build projects, create a good resume, and earn relevant certifications. I also need to practice for job interviews and improve my communication skills. Even if I do not get accepted immediately, I will continue learning and gaining experience until I am ready for better opportunities.
